EACH TIME BEFORE USING MACHINE

This machine should only ever be used by a trained and competent person.

Upon acceptance, please check the machine has in no way been damaged in transit and works, and each time prior to use. If you have any questions or doubts, please contact us, also in the event of breakdown or damage.

Please check that all safety mechanisms and switches are intact and working correctly.

Please make sure that the floor you are about to prep is clear of all foreign objects that could cause damage to the machine or operator. This must be completed every time before using the machine. The machine must only be used and moved on level surfaces. There is a risk of crushing if the machine starts to roll. Beforehand perform a scan of the surface to look out for bolts and studs, preferably using a metal detector.

Please check every day that all belts, bearings and moving parts are in good condition because this could lead to something breaking and causing injury.

To transport the machine, place the weights carefully onto the designated spot on the handle.

USING THE MACHINE

Make sure that the machine is unplugged. Open the black top of the machine (known as the hopper) and fill with shot up to just below the gauze. Make sure no foreign objects are in the hopper before use. Sweep or vac the area you intend to blast making sure that no foreign objects are on the floor. This can cause significant damage if not followed. When ready to blast start quickly and pull the lever up towards the main handle. The speed control is the other dial that can be turned clockwise to speed up and anti-clockwise to slow down. If the blast is not sufficient slow the machine down slightly. Repeat this stage until the pattern is the desired effect

AFTER USING AND PRIOR TO RETURNING THE MACHINE

Please ensure that the machine is unplugged and kept in a safe place.

An off-hire will never be arranged at the beginning of the hire period. Please call the office and arrange collection as soon as you know when the machine/machines will no longer be required.

Please make sure the machine is returned in a fit and clean state to avoid charges.

If multiple machines are being collected, please have them placed neatly together, ready to collect because time may be charged if we have to search or wait for equipment. Items not available for collection will remain on hire and additional collection charges will apply. If the machine is to be collected by a carrier, please ensure it's strapped securely to the pallet using the straps that it arrived with and is left somewhere obvious and preferably arrange for someone to be responsible for supervising the collection.

All information above is provided for guideline purposes only. For more accurate and reliable information please refer to the manufacturer.
